

It's my pleasure to introduce myself...well, I'm Akhila Reddy Vancha from Hyderabad, Telangana. I'm an Engineering graduate(2020) in computer science stream. All my studies from matriculation to graduation done in local area only. I'm the only child to my parents. My dad was expired when I was 5yrs old and I have been raised by my mother. She is a private teacher and as u know single parenting is some what strict and that discipline made me to stand on my legs today. Then, after completion of my graduation within 4 months I cracked a job. Currently I'm working as Associate Software Engineer , here we are working on government schemes. I love working here because I can see the results of my efforts and work directly as we work on government projects. Technical skills I know are sql and python. As I want to explore more in my career I should learn any booming course so that I choosed Data science course in EDYODA university with my friend's reference. Particularly I choosed Data science because my current domain is also on database so that I thought I can do better if I choose this. I'm learning well here and also going to build a project based on booking a movie ticket i.e., book my show app.

I would like to tell you about my hobbies, I spend my free time by writing poetry on nature and love, painting and I also read books of ROBIN SHARMA and CHETAN BHAGAT. My favorite book is "Who will cry when you die? " because, the book includes the life lessons that everyone should learn. And every Hobby here depends up on my emotion like, I do painting when I feel sad, I write poetry when I feel happy and reading goes with the flow in any emotion. And I also have some achievements in curricular activities like I won silver medal in THANG_THA(martial art) at state level championship and selected for national level championship, bronze medal in Boxing at state level and I was also Volleyball player. Finally, my short term goal is to crack a good job in a software company(good based on where I can learn and earn better) and my long term goal is to start a business.
